

Four repeats, three different ions

identical composition; separated only by the filter (fig. 3)

An ABC transporter that is a channel, and one that is not

one accession apart: PF14396, CFTR's R domain

A chloride channel and a lipid scramblase

no sequence-level difference is known

One domain, three families

PF08016 spans TRPML, TRPP and a protein that is not a pore

Domains that exist outside channels

each pair shares its first-listed domain and only one is a channel
